HiPath Mobile Connect

NOTE: The use of HiPath MobileConnect with HiPath 4000 V5 is possible as of HiPath Mobile Connect version V2!

HiPath MobileConnect enables mobile users with “dual-mode” WiFi and cellular handsets to utilize the local WLAN to make free VoIP calls when within range, but also offers a number of unique capabilities that significantly increase the value of the solution. MobileConnect is tightly integrated with the HiPath 4000, giving users a single number that they can be reached at wherever they are, as well as a broad array of enterprise PBX features. Roam-in Roam-out functionality enables MobileConnect users to roam between the WLAN and cellular network without disruption. Dual mode operation is the usage of a single device (e.g. mobile phones and PDAs) via cellular and voice enabled WLAN radio networks.

For more information on the feature and the HiPath 4000 specific administration please refer to the documentation of HiPath Mobile Connect.
